

【Product Name】

Porous Bone Repair Materials

【Product Introduction】

The unique multi-stage porous structure of the product meets the requirements of various mechanical structure for bone repair, which can achieve large-volume regeneration and repair of bone tissue, and has the function of guiding the reconstruction of subchondral bone, to greatly improve the clinical therapeutic effect of existing orthopaedic diseases. Its mechanical properties are closer to human bone tissue, and it has high biosafety, stabilising and releases bioactive components.
