

【Product Name】

Collagen Sponge

【Product Introduction】

Collagen sponges not only promote cell growth, but also have an effect on the maintenance of cell division function. They are commonly used in wound dressings, and widely applied in the field of medical aesthetics. Collagen can also be used as hemostatic materials, which can promote the coagulation of platelets by activating coagulation factors XII、 XI and V, and can fill up wounds of different sizes in surgery. They can play a good role in general surgery, orthopaedics surgery, oral surgery and other operations .
