

【Product Name】

Neuroendoscopy

【Product Introduction】

Neuroendoscopy is a minimally invasive disease diagnostic technology that utilizes micro-endoscopic equipment. It passes into cranium, and with the help of precise optical and camera technology, it directly observes and handles the diseased tissues. With the advantages of visualization, precise positioning, small trauma, fast recovery, it also enables surgical procedures under endoscopic guidance. The product is suitable for assisting in the diagnosis of neurological diseases, assisting in minimally invasive surgery, evaluating surgical effects and other scenarios.
