

【Product Name】

Multi-Branch Artificial Blood Vessel Stent Graft System

【Product Introduction】

The product consists of two parts: an artificial blood vessel and a suture-free fixation band for endoluminal repair by means of an aortic stent graft. This product is able to reduce the duration of circulatory arrest, avoid profound hypothermia, and lower the surgical difficulty. In addition, the device can clearly simplify the difficulty of surgical operation in descending part of aorta arch, which facilitates the popularity of aortic dissection surgery.
