

**【Product Name】**

Medical Chitosan

**【Product Introduction】**

Chitosan, also known as deacetylated chitin, is obtained by deacetylation of chitin, which is widely available in nature. Its structural unit is a disaccharide, and it is the only alkaline polysaccharide found in nature so far. It has many advantages such as non-toxicity, biodegradability, reactivity, safety, and antibacterial properties. It can be used as drug carriers, medical membrane and dressings, tissue engineering scaffold materials, assisting to lower blood fat and cholesterol, protecting liver and so on.
