

【Product Name】

Hair Transplantation Robotics

【Product Introduction】

The product adopts high-definition 3D image guidance technology combined with intelligent robotic arms, which can repeatedly extract a large number of transplanted hair follicles with high precision. Through real-time control and artificial intelligence algorithms, it can obtain the most suitable transplanted hair follicles with optimal angle and depth recognition, and assist doctors in completing the multi-hair transplantation surgery. It is suitable for hair transplant surgery for people with black hair and straight hair.
