

【Product Name】

Left Ventricular Assistant System

【Product Introduction】

The product is an implantable medical device used to assist the heart's pumping function. It can improve quality of life and prolong survival of patients with heart failure, and even serve as a permanent cardiac assistive means. It can also provide transitional support for patients awaiting heart transplantation, increasing their chances of receiving transplant surgery. It is intended for using in medical institutions that are equipped to provide heart transplantation and comprehensive postoperative care.
