

【Product Name】

Transcatheter Tricuspid Clip and Delivery System

【Product Introduction】

The products are generally made of polymer materials, animal tissues, metallic materials, with or without surface modifying substances. It is designed with 3D stereotactic bending control, precise positioning, and extremely very small bending control radius. It also offers a 1:1 torque control with sensitive feedback. For the treatment of functional tricuspid regurgitation, the product achieves repair through the clamping of the valve leaflets .
