

【Product Name】

Alzheimer's Disease Magnetic Resonance Imaging Diagnostic Support Software

【Product Introduction】

The product is based on clinical brain structure MRI data to achieve a clear display of brain anatomical structures with high resolution, which can clearly distinguish between cerebral cortex and white matter in the brain, clearly display widened and deepened brain sulcus and enlarged ventricles in dementia patients, and can carry out linear, area and volume measurements of intracerebral structures such as the hippocampus and amygdala. It can be used to assist in precise clinical diagnosis at an ultra-early stage and predict disease progression.
